About the SIGs covering the Resource Management Space

Update June 2021

The Resource Management SIG as a full group has been suspended for three months (June-September 2021). The previous subgroups have been updated to be full SIGs. This page will still explain their charge and structure.

About us

The Resource Management SIG works with developers to define essential functions for acquiring and managing all types of materials: fund structures, orders, receiving, payment, claims, licensing, access and authentication methods, maintenance, usage and other statistics, other possible evaluation tools, and reporting. The SIG will consider options to show relationships between resources, and mechanisms and workflows needed to support these functions. The SIG will also need to evaluate the potential for applications supporting selection, decision-making, and analysis with the aim of ensuring that current work does not limit future innovation. The Resource Management SIG advises developers on the coordination needed between its operations and other functions, such as metadata management. It also advises developers on the interactions needed between libraries, vendors, and other parties necessary for successful resource management.

Current Structure

Because the topical area covered by Resource Management is so large, work is divided into separate SIGs. There are three main SIGs that are currently active:

**Acquisitions SIG**

The Acquisitions Subgroup is charged with working with developers to develop, refine, and review the acquisitions functionality and user experience. Members, generally acquisitions specialists, commit to regular meeting attendance, and to work on projects and tasks outside of meeting times that contribute to the requirements definitions, refinement, user experience improvements and testing. Members are expected to stay current with pertinent topics in order to keep discussions moving forward. Meeting notes are available on the wiki.

**Co-conveners:** Susan Martin and Heather Thoele

**Product Owner:** @Dennis Bridges

**ERM SIG**

The ERM Group is charged with working with developers to develop, refine, and review functionality needed to support the management of library electronic resources. This includes Agreements, Licenses, and eResources. Members, generally e-resource management specialists, commit to regular meeting attendance, and to work on projects and tasks outside of meeting times that contribute to the requirements definitions, refinement, user experience improvements and testing. There will also be regular meeting time devoted to implementation topics raised by the members. Members are expected to stay current with pertinent topics in order to keep discussions moving forward. Meeting notes are available on the wiki.

**Co-conveners:** Martina Schildt and Martina Tumulla

**Product Owner:** Owen Stephens

**Open Access SIG**

Management of Gold and Transformative Open Access agreements, and the related recording, verification and funding of OA publications.

**Convener:** Björn Muschall

**Product Owner:** Owen Stephens

What groups should I join?

As an open-source project, all FOLIO SIG meetings are open for interested individuals to attend. We recommend that individuals with the expertise, time, and interest in actively contributing to the development of resource management functionality join the appropriate group. Members on these groups will have regular homework and the opportunity to contribute to the development of functionality at a very granular level. Other individuals interested in a higher-level view, presentations on progress, and the chance to evaluate RM workflows should join the RM SIG meeting. All groups welcome open discussion, engaged participation and encourage a diversity of perspectives. As a collaborative community project, the more people that are engaged, the better the product will be and the more needs that will be able to be served. All members participating in these groups that are agreeing to abide by the FOLIO Code of Conduct in meetings.

Other groups may be formed on a temporary basis to address specific needs. Members from other SIGs may be recruited to serve on these temporary groups, for example the e-usage group.

Agendas for the meetings will be shared on Slack in advance whenever possible.
