    - Highlights:
      - When it comes to Reserves - what belongs in the control of the library and what belongs in the control of a LM system?
      - What is truly needed in the first version of FOLIO and what can be built out?
      - How/Should/Can historical reserves information be stored - is pre migration data different than post migration history?
      - Sites using Ares need to be able to use an API to send temporary shelving location/library/institution and temporary item status
      - It would be great if FOLIO and Atlas could work together to adapt the tools they already have in order to create reserves module of everyone's dreams
