LDP Reference Environment

A hosted Library Data Platform (LDP) database is currently available for the reporting community. It provides access to data extracted from folio-snapshot and is updated daily. ERM and MARC/SRS data are not yet included.

To access the database using a web browser:

- URL: https://glintcore.net:8443/phppgadmin
- User name: ldp
- Password: (contact Sharon Beltaine, Reporting SIG convener)
- Database name: ldp_snapshot

To access the database using a reporting tool such as Tableau:

- Host: glintcore.net
- Port: 5432
- Database name: ldp_snapshot
- User name: ldp
- Password: (contact Sharon Beltaine, Reporting SIG convener)
- SSL mode: require
- JDBC: jdbc:postgresql://glintcore.net:5432/ldp_snapshot

For more information about using the database: https://github.com/folio-org/ldp/blob/master/USER_GUIDE.md

For query developers: Another database called ldp_query_dev is used by the FOLIO reporting community for query development and testing. It houses a relatively static data set maintained at https://github.com/folio-org/ldp-analytics/tree/master/testdata and updated occasionally. To access this database, use the same settings as above, but change the database name to ldp_query_dev.
