Acquisitions Credits Module (Deprecated)

Description:
This module manages the recording of a credit against a fund within acquisitions. This could encompass anything from refunds, cash injection, gifts, fund allocations, etc.

Documentation:
Attached below you will find a data-flow model that describes what data is being passed between this module and other modules within FOLIO. You will also find an Entity Relationship Diagram that illustrates what specific data elements are being stored in this module and what data elements are being retrieved from other modules. The dark grey tables indicate elements that are hard coded.

ERD (Entity Relationship Diagram):
