About us

The Metadata Management SIG works with developers to define essential bibliographic management functions: creating, editing, suppressing, deleting, importing, exporting, replacing, overlaying, and reporting. Defines essential data elements of a bibliographic control module. Explores various formats/schema that should be incorporated into FOLIO (MARC, RDA, BIBFRAME, Dublin Core, etc.)

Considers metadata storage and harmonization between traditional library materials, knowledge bases, and other forms of information managed by libraries. Also suggests requirements for holdings and item records, item statuses, and location types and location codes. Defines core authority functions. Advises developers on the interactions needed between libraries and vendors to allow for creation and loading of bibliographic and authority records. Plans for flexibility in light of rapid technological changes. Focuses on data interchangeability as a key component for greater inter-library cooperation. Coordinates closely with Resource Management and Resource Access SIGs.

Communication Channels

- Discuss.folio.org category
- metadata-mgmt-sig Mailing List
- Wiki space (this page)
- YouTube Channel (recordings of FOLIO forums, sprint reviews, etc.)

See FOLIO Communication Spaces for more details about the project’s communication channels.
